Fractional Safety Management

A cost-effective solution to embed expert WHS leadership into your business

Fractional Safety Management gives small-medium businesses access to the experience, strategy, and practical know-how of senior safety leaders. It helps strengthen your safety capability in a flexible way, without the cost or impact of outsourcing, one-off consulting, or full-time safety hires.

From strategies to manage your unique safety challenges through to navigating everyday safety needs like manual handling, slips, trips and falls, customer and staff safety, workplace hazards, return to work processes, and more. A fractional safety management approach empowers you with the expertise to manage safety consistently, and move from reactive to proactive safety.

Why is Fractional Safety Management trending?

With regulatory pressure increasing, reactive safety is no longer enough.

You need experienced safety expertise, but that comes with increased cost, headcount, and operational strain.

A fractional approach solves this!

Get the experience you need, as you need it, without the overhead.

What's the benefit for your business?

Budget friendly

Expertise and know-how

Consistency and follow through

Introducing:

Safety Management as a Service

SMaaS - Our Fractional Safety Management solution for small-medium businesses

Safety Management as a Service (SMaaS) is our cost effective, fractional safety management solution that embeds a team of Action OHS safety leaders into your business, sharing responsibility for supporting your safety requirements and objectives. We also deploy Safety Champion, a leading cloud based safety and risk management platform, to further empower your business with safety process digitisation, smart workflows and powerful automation tools.

SMaaS delivers access to trusted safety leaders alongside smart workflows and proactive cost minimisation, without compromising safety or quality.

It's about understanding your business, building trust, and delivering better safety outcomes.
